

Enginuity Communications, Inc. Acquires Assets of Pulsecom

Companies Combine OSP and Network Edge Expertise

St. Charles, IL July 15, 2016 --- Enginuity Communications, Inc., a leading manufacturer of service interface products for fiber and copper networks, announces the acquisition of assets of Pulse Communications, Inc.

“With over 50 years of telecommunications experience, Pulsecom is an outstanding addition to Enginuity’s business,” said Steve Todd, President of Enginuity Communications. “Pulsecom’s Ethernet and SONET access platforms broaden the Enginuity product portfolio of transmission and connectivity products so that we can provide our customers with more complete network edge solutions.”

“Like us, Pulsecom focuses on solving practical, real-world installation and deployment issues,” explained Michael Mele, Sr. Vice President of Enginuity. “This acquisition delivers on our strategy to help our customers accelerate service delivery and cut costs with products optimized for outside plant and customer premises applications”.

About Enginuity Communications:

Incorporated in 2001, Enginuity Communications is a privately held company founded on the principal of building successful relationships with customers, employees and business associates in order to provide innovative and intelligent solutions at the network edge. Enginuity’s broadband and legacy interface products are deployed by major North American telcos and are built to withstand the rigorous requirements of service provider environments.
